

PPC 1146 (Mix Room): Quick Settings Reference

Last Modified on 12/03/2025 3:17 pm EST

This reference provides the recommended settings for using room 1146, the Mix Room, at the Post Production Center (PPC).

Important Info Before Changing Settings

Before altering any settings, please note:

- The hardware is calibrated. *If you are unsure of how to adjust the appropriate settings, please ask the PPC staff for assistance.*
- These recommendations are specific to room 1146 at the PPC.

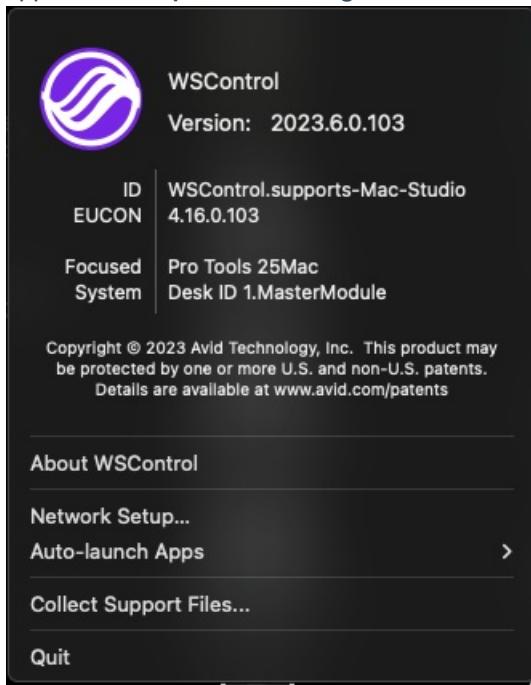

Connection

If the S4 seems stuck:

1. Identify the *Layout* button on the console.
2. If the *Layout* button is glowing, **press** the button to de-select layout mode.

If the S4 is not connecting to Pro Tools:

1. Navigate to the *System Settings*. Confirm that **Wi-Fi is not enabled**.
2. In the upper right hand corner of the tool bar, find the icon for the *WSControl* application. Confirm that the application is **open** and running.

3. Ensure the S4 Console is connected to WSControl.

- a. **Select** **Settings** on the S4 Master Module, the main touch screen.
- b. **Click and drag** **supports-Mac-studio** from the left-side column to the right-side connected column.
4. If the S4 is still not connecting to Pro Tools: **restart** the computer.

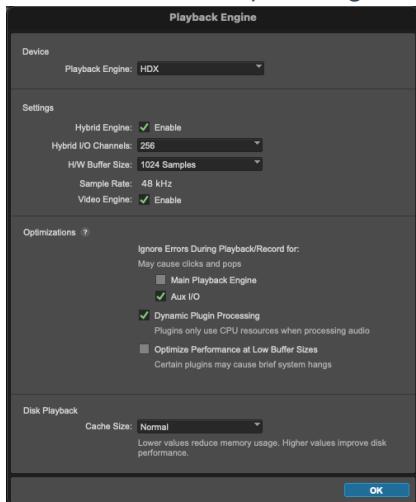

Sound

If no sound is coming from Pro Tools:

1. Navigate to the application **DADman**. Confirm that the application is **open** and running.
2. Open a web browser window, and **play audio** from another source, such as Youtube or NYU Stream.

If sound is playing from another source but not from Pro Tools:

1. Return to the Pro Tools window and **open** the *Playback Engine* settings.
2. Ensure the Device Playback Engine is assigned to **HDX**.

3. Additionally, adjusting the outputs can help resolve this issue.
 - a. Open the I/O settings, then **set** the Outputs to *default*.

Picture

If no picture:

1. Confirm that the projector is on.
2. On the HDMI switcher, found near the USB hub, **select** **BlackMagic**.
3. Confirm that the Video Window is **open** in Pro Tools.
